CS23331-DAA-2024-CSE / 5-G-Product of Array elements-Minimum

5-G-Product of Array elements-Minimum

Started on Tuesday, 19 August 2025, 11:42 PM

State Finished

Completed on Tuesday, 19 August 2025, 11:46 PM

Time taken 3 mins 33 secs

Marks 1.00/1.00

Grade 10.00 out of 10.00 (100%)

Question 1 | Correct Mark 1.00 out of 1.00

Given two arrays array_One[] and array_Two[] of same size N. We need to first rearrange the arrays such that the sum of the product of pairs(1 element from each) is minimum. That is SUM (A[i] * B[i]) for all i is minimum.

For example:

Input	Result
3	28
1	
2	
3	
4	
5	
6	

Answer: (penalty regime: 0 %)

```

1 #include <stdio.h>
2 #include <stdlib.h>
3
4 // Ascending sort
5 v int compareAsc(const void *a, const void *b) {
6     return (*(int *)a - *(int *)b);
7 }
8
9 // Descending sort
10 v int compareDesc(const void *a, const void *b) {
11     return (*(int *)b - *(int *)a);
12 }
13
14 v int main() {
15     int n;
16     scanf("%d", &n);
17
18     int array_One[n], array_Two[n];
19 v     for (int i = 0; i < n; i++) {
20         scanf("%d", &array_One[i]);
21     }
22 v     for (int i = 0; i < n; i++) {
23         scanf("%d", &array_Two[i]);
24     }
25
26     qsort(array_One, n, sizeof(int), compareAsc);
27     qsort(array_Two, n, sizeof(int), compareDesc);
28
29     long long minSum = 0;
30 v     for (int i = 0; i < n; i++) {
31         minSum += (long long)array_One[i] * array_Two[i];
32     }
33
34     printf("%lld\n", minSum);
35     return 0;
36 }
37

```

4-G-Array Sum max problem

Started on Tuesday, 19 August 2025, 11:35 PM

State Finished

Completed on Tuesday, 19 August 2025, 11:42 PM

Time taken 6 mins 39 secs

Marks 1.00/1.00

Grade 10.00 out of 10.00 (100%)

Question 1 | Correct Mark 1.00 out of 1.00

Given an array of N integer, we have to maximize the sum of arr[i] * i, where i is the index of the element (i = 0, 1, 2, ..., N). Write an algorithm based on Greedy technique with a Complexity O(nlogn).

Input Format:

First line specifies the number of elements-n

The next n lines contain the array elements.

Output Format:

Maximum Array Sum to be printed.

Sample Input:

5

2 5 3 4 0

Sample output:

40

Answer: (penalty regime: 0 %)

```

1 #include <stdio.h>
2 #include <stdlib.h>
3
4 // Comparison function for qsort (ascending order)
5 v int compare(const void *a, const void *b) {
6     return (*(int *)a - *(int *)b);
7 }
8
9 v int main() {
10    int n;
11    scanf("%d", &n);
12
13    int arr[n];
14 v for (int i = 0; i < n; i++) {
15        scanf("%d", &arr[i]);
16    }
17
18    // Sort array in ascending order
19    qsort(arr, n, sizeof(int), compare);
20
21    // Calculate maximum weighted sum
22    long long maxSum = 0;
23 v for (int i = 0; i < n; i++) {
24        maxSum += (long long)arr[i] * i;
25    }
26
27    printf("%lld\n", maxSum);
28    return 0;
29 }
30

```

Time taken 10 mins 17 secs

Marks 1.00/1.00

Grade 10.00 out of 10.00 (100%)

Question 1 | Correct Mark 1.00 out of 1.00

A person needs to eat burgers. Each burger contains a count of calorie. After eating the burger, the person If he has eaten f burgers with c calories each, then he has to run at least $3^f * c$ kilometers to burn out the burgers with the count of calorie in the order: [1, 3, 2], the kilometers he needs to run are $(3^0 * 1) + (3^1 * 3) + (3^2 * 2)$. But this is not the minimum, so need to try out other orders of consumption and choose the minimum value. Define the number of burgers and the number of calories for each burger.

Input Format

First Line contains the number of burgers

Second line contains calories of each burger which is n space-separated integers

Output Format

Print: Minimum number of kilometers needed to run to burn out the calories

Sample Input

3

5 10 7

Sample Output

76

For example:

Test	Input	Result
Test Case 1	3 5 10 7	18

Answer: (penalty regime: 0 %)

```

1 #include<stdio.h>
2 #include<stdlib.h>
3 #include<math.h>
4 int cmpDesc(const void*a,const void*b){
5     return(*(int*)b-*(int*)a);
6 }
7 }
8 int main(){
9     int n;
10    scanf("%d",&n);
11    int calories[n];
12    for(int i=0;i<n;i++){
13        scanf("%d",&calories[i]);
14    }
15    qsort(calories,n,sizeof(int),cmpDesc);
16    long long result=0;
17    for(int i=0;i<n;i++){
18        result+=(long long) pow(n,i)*calories[i];
19    }
20    printf("%lld\n",result);
21 }
```

	Test	Input	Expected	Got
1	Test Case 1	3 5 10 7	18	18 ✓

		1 3 2			
✓	Test Case 2	4 7 4 9 6	389	389	✓
✓	Test Case 3	3 5 10 7	76	76	✓

Passed all tests! ✓

Correct

Marks for this submission: 1.00/1.00.

2-G-Cookies Problem

Started on Tuesday, 19 August 2025, 11:15 PM

State Finished

Completed on Tuesday, 19 August 2025, 11:21 PM

Time taken 5 mins 47 secs

Marks 1.00/1.00

Grade 10.00 out of 10.00 (100%)

Question 1 | Correct Mark 1.00 out of 1.00

Assume you are an awesome parent and want to give your children some cookies. But, you should give each child at most one cookie.

Each child i has a greed factor $g[i]$, which is the minimum size of a cookie that the child will be content with; and each cookie j has a size $s[j]$. If $s[j] \geq g[i]$, we can assign the cookie j to the child i , and the child i will be content. Your goal is to maximize the number of your content children and output the maximum number.

Example 1:

Input:

3

1 2 3

2

1 1

Output:

1

Explanation: You have 3 children and 2 cookies. The greed factors of 3 children are 1, 2, 3.

And even though you have 2 cookies, since their size is both 1, you could only make the child whose greed factor is 1 content.

You need to output 1.

Constraints:

$1 \leq g.length \leq 3 * 10^4$

$0 \leq s.length \leq 3 * 10^4$

$1 \leq g[i], s[j] \leq 2^{31} - 1$

Answer: (penalty regime: 0 %)

```

1 #include <stdio.h>
2 #include <stdlib.h>
3
4 // Comparison function for qsort
5 v int compare(const void *a, const void *b) {
6     return (*(int *)a - *(int *)b);
7 }
8
9 v int main() {
10    int n, m;
11    scanf("%d", &n); // Number of children
12
13    int g[n];
14 v   for (int i = 0; i < n; i++) {
15        scanf("%d", &g[i]);
16    }
17
18    scanf("%d", &m); // Number of cookies
19
20    int s[m];
21 v   for (int i = 0; i < m; i++) {
22        scanf("%d", &s[i]);
23    }
24
25    // Sort greed factors and cookie sizes
26    qsort(g, n, sizeof(int), compare);
27    qsort(s, m, sizeof(int), compare);
28
29    int i = 0, j = 0, content = 0;
30
31 v   while (i < n && j < m) {
32       if (s[j] >= g[i]) {
33           content++;
34           i++;
35       }
36   }
37
38   printf("%d", content);
39 }

Completed on	Tuesday, 19 August 2025, 11:15 PM
Time taken	2 mins 11 secs
Marks	1.00/1.00
Grade	10.00 out of 10.00 (100%)

Question 1 | Correct Mark 1.00 out of 1.00 [Flag question](#)

Write a program to take value V and we want to make change for V Rs, and we have infinite supply of each of the denominations in Indian currency, i.e., we have infinite supply of { 1, 2, 5, 10, 20, 50, 100, 500, 1000} valued coins/notes, what is the minimum number of coins and/or notes needed to make the change.

Input Format:

Take an integer from stdin.

Output Format:

print the integer which is change of the number.

Example Input :

64

Output:

4

Explanation:

We need a 50 Rs note and a 10 Rs note and two 2 rupee coins.

Answer: (penalty regime: 0 %)

```
1 #include <stdio.h>
2
3 int main() {
4     int V;
5     scanf("%d", &V);
6
7     int denominations[] = {1000, 500, 100, 50, 20, 10, 5, 2, 1};
8     int count = 0;
9
10    for (int i = 0; i < 9; i++) {
11        if (V >= denominations[i]) {
12            count += V / denominations[i];
13            V = V % denominations[i];
14        }
15    }
16
17    printf("%d\n", count);
18    return 0;
19 }
20
```
