## 1-Number of Zeros in a Given Array

Started on Sunday, 19 October 2025, 7:10 PM

State Finished

Completed on Sunday, 19 October 2025, 7:17 PM

Time taken 7 mins 14 secs

Marks 1.00/1.00

Grade 10.00 out of 10.00 (100%)

Question 1 | Correct Mark 1.00 out of 1.00 ⚡ Flag question

### Problem Statement

Given an array of 1s and 0s this has all 1s first followed by all 0s. Aim is to find the number of 0s. Write a program using Divide and Conquer to Count the number of zeroes in the given array.

#### Input Format

First Line Contains Integer m – Size of array

Next m lines Contains m numbers – Elements of an array

#### Output Format

First Line Contains Integer – Number of zeroes present in the given array.

### Answer: (penalty regime: 0 %)

```

1 #include <stdio.h>
2 int findFirstZero(int arr[], int low, int high) {
3     if (low > high)
4         return -1;
5     int mid = low + (high - low) / 2;
6
7     if (arr[mid] == 0 && (mid == 0 || arr[mid - 1] == 1))
8         return mid;
9     else if (arr[mid] == 1)
10        return findFirstZero(arr, mid + 1, high);
11    else
12        return findFirstZero(arr, low, mid - 1);
13    }
14
15
16 int main() {
17     int m;
18     scanf("%d", &m);
19
20     int arr[m];
21     for (int i = 0; i < m; i++) {
22         scanf("%d", &arr[i]);
23     }
24
25     int firstZeroIndex = findFirstZero(arr, 0, m - 1);
26     int zeroCount = (firstZeroIndex == -1) ? 0 : m - firstZeroIndex;
27
28     printf("%d\n", zeroCount);
29     return 0;
30 }
31

```

CS23331-DAA-2024-CSE / 2-Majority Element

## 2-Majority Element

Started on	Monday, 3 November 2025, 8:28 AM
State	Finished
Completed on	Monday, 3 November 2025, 8:35 AM
Time taken	6 mins 37 secs
Marks	1.00/1.00
Grade	10.00 out of 10.00 (100%)

Question 1 | Correct Mark 1.00 out of 1.00

Given an array `nums` of size `n`, return *the majority element*.

The majority element is the element that appears more than `[n / 2]` times. You may assume that the majority element always exists in the array.

**Example 1:**`Input: nums = [3,2,3]``Output: 3`**Example 2:**`Input: nums = [2,2,1,1,1,2,2]``Output: 2`**Constraints:**

- `n == nums.length`
- `1 <= n <= 5 * 104`
- `-231 <= nums[i] <= 231 - 1`

**For example:**

Input	Result
3	3
3 2 3	
7	2
2 2 1 1 1 2 2	

**Answer:** (penalty regime: 0 %)

```

1 #include <stdio.h>
2
3 int findMajorityElement(int nums[], int n) {
4     int count = 0, candidate = 0;
5
6     for (int i = 0; i < n; i++) {
7         if (count == 0) {
8             candidate = nums[i];
9             count = 1;
10        } else if (nums[i] == candidate) {
11            count++;
12        } else {
13            count--;
14        }
15    }
16
17    return candidate;
18 }
19
20 int main() {
21     int n;
22     scanf("%d", &n);
23
24     int nums[n];
25     for (int i = 0; i < n; i++) {
26         scanf("%d", &nums[i]);
27     }
28
29     int result = findMajorityElement(nums, n);
30     printf("%d\n", result);
31 }
```

**Grade:** **10.00** out of 10.00 (100%)

**Question 1** | Correct Mark 1.00 out of 1.00 

**Problem Statement:**  
Given a sorted array and a value x, the floor of x is the largest element in array smaller than or equal to x. Write divide and conquer algorithm to find floor of x.

**Input Format:**  
First Line Contains Integer n – Size of array  
Next n lines Contains n numbers – Elements of an array  
Last Line Contains Integer x – Value for x

**Output Format:**  
First Line Contains Integer – Floor value for x

**Answer:** (penalty regime: 0 %)

```
1 #include <stdio.h>
2
3 int findFloor(int arr[], int low, int high, int x) {
4     if (low > high)
5         return -1;
6
7     int mid = low + (high - low) / 2;
8
9     if (arr[mid] == x)
10        return arr[mid];
11    else if (arr[mid] > x)
12        return findFloor(arr, low, mid - 1, x);
13    else {
14        int temp = findFloor(arr, mid + 1, high, x);
15        return (temp == -1) ? arr[mid] : temp;
16    }
17 }
18
19 int main() {
20     int n, x;
21     scanf("%d", &n);
22
23     int arr[n];
24     for (int i = 0; i < n; i++)
25         scanf("%d", &arr[i]);
26
27     scanf("%d", &x);
28
29     int floorValue = findFloor(arr, 0, n - 1, x);
30     printf("%d\n", floorValue);
31
32     return 0;
33 }
```

## 4-Two Elements sum to x

Started on Sunday, 19 October 2025, 7:26 PM

State Finished

Completed on Sunday, 19 October 2025, 7:38 PM

Time taken 12 mins 6 secs

Marks 1.00/1.00

Grade 10.00 out of 10.00 (100%)

Question 1 | Correct Mark 1.00 out of 1.00

### Problem Statement:

Given a sorted array of integers say arr[] and a number x. Write a recursive program using divide and conquer strategy to check if there exist two elements in the array whose sum = x. If there exist such two elements then return the numbers, otherwise print as "No".

Note: Write a Divide and Conquer Solution

### Input Format

First Line Contains Integer n – Size of array

Next n lines Contains n numbers – Elements of an array

Last Line Contains Integer x – Sum Value

### Output Format

First Line Contains Integer – Element1

Second Line Contains Integer – Element2 (Element 1 and Elements 2 together sums to value "x")

### Answer: (penalty regime: 0 %)

```

1 #include <stdio.h>
2
3 // Recursive function to find two elements whose sum is x
4 int findPair(int arr[], int left, int right, int x, int *a, int *b) {
5     if (left >= right)
6         return 0;
7
8     int sum = arr[left] + arr[right];
9
10    if (sum == x) {
11        *a = arr[left];
12        *b = arr[right];
13        return 1;
14    } else if (sum < x) {
15        return findPair(arr, left + 1, right, x, a, b);
16    } else {
17        return findPair(arr, left, right - 1, x, a, b);
18    }
19}
20
21 int main() {
22     int n, x;
23     scanf("%d", &n);
24
25     int arr[n];
26     for (int i = 0; i < n; i++)
27         scanf("%d", &arr[i]);
28
29     scanf("%d", &x);
30
31     int a, b;
32     if (findPair(arr, 0, n - 1, x, &a, &b)) {
33         printf("%d\\n%d\\n", a, b);
34     } else {
35         printf("No\\n");
36     }
37
38     return 0;
39}
40

```

## 5-Implementation of Quick Sort

Started on	Sunday, 19 October 2025, 7:38 PM
State	Finished
Completed on	Sunday, 19 October 2025, 7:44 PM
Time taken	5 mins 57 secs
Marks	1.00/1.00
Grade	<b>10.00</b> out of 10.00 (100%)

Question 1 | Correct Mark 1.00 out of 1.00

Write a Program to Implement the Quick Sort Algorithm

Input Format:

The first line contains the no of elements in the list-n

The next n lines contain the elements.

Output:

Sorted list of elements

For example:

Input	Result
5	12 34 67 78 98
67 34 12 98 78	

Answer:

```

1 #include <stdio.h>
2
3 // Function to swap two elements
4 void swap(int *a, int *b) {
5     int temp = *a;
6     *a = *b;
7     *b = temp;
8 }
9
10 // Partition function
11 int partition(int arr[], int low, int high) {
12     int pivot = arr[high]; // choosing last element as pivot
13     int i = low - 1;
14
15     for (int j = low; j < high; j++) {
16         if (arr[j] < pivot) {
17             i++;
18             swap(&arr[i], &arr[j]);
19         }
20     }
21
22     swap(&arr[i + 1], &arr[high]);
23     return i + 1;
24 }
25
26 // Quick Sort function
27 void quickSort(int arr[], int low, int high) {
28     if (low < high) {
29         int pi = partition(arr, low, high);
30
31         quickSort(arr, low, pi - 1);
32         quickSort(arr, pi + 1, high);
33     }
34 }
35
36 int main() {
37     int n;
38     scanf("%d", &n);
39
40     int arr[n];
41     for (int i = 0; i < n; i++) {
42         scanf("%d", &arr[i]);
43     }
44
45     quickSort(arr, 0, n - 1);
46
47     for (int i = 0; i < n; i++) {
48         printf("%d ", arr[i]);
49     }
50
51     return 0;
52 }
```
